October timing

November timing

Early-spring Applications

GR Italian Ryegrass Control on April 12, 2010

Late-spring Applications

Gramoxone Inteon Tank-mixtures GR Italian Ryegrass Control 28 DAT

Problem

- Only 6 commercial herbicides are effective against GR Italian ryegrass—4 residuals and 2 POST herbicides.
- GR Italian ryegrass has broad emergence window ranging from August-September to March-April.
- Environmental conditions make herbicide applications challenging during the optimum application window.
- Biomass accumulation and stiff straw of Italian ryegrass negatively impact planting and seedling development.

Fall-Spring Programs

- **Factor 1:** Fall application
 - No fall treatment
 - Double disk
 - Dual Magnum at 1.33 PT/A + Gramoxone at 3 PT/A
- **Factor 2:** Winter application
 - No winter treatment
 - Select Max at 12 OZ/A
- **Factor 3:** Spring application
 - No spring treatment
 - Gramoxone SL at 4 PT/A

Fall-Spring Programs
