## 'Gold-Standard' Cotton Genome Sequence Will Advance Fiber, Fuel, and Food Applications

Thursday January 05, 2012

### New York, NY

An international consortium, led by Professor Andrew Paterson of the University of Georgia, has made publicly available the first 'gold-standard' genome sequence for cotton. Cotton was among the first plants studied at the molecular level, and the sequence obtained by Paterson and his team is the culmination of a 20-plus year effort in the analysis of cotton genes and genomic DNA. This critical sequence will be invaluable to better understanding and optimizing the production and sustainability of the cotton plant.

The research effort of Paterson and others gained momentum in 2007 when a proposal from 22 leading cotton scientists representing the world's seven largest cotton-producing nations was approved by the United States Department of Energy (DOE) Joint Genome Institute (JGI) Community Sequencing Program. The study established the strategy that was used for 'gold-standard' sequencing of the New World cotton progenitor, *Gossypium raimondii*; which was chosen by the worldwide cotton community to be the first of 50 cotton species to be sequenced. "This achievement, and the ongoing research community annotations of our cotton genome, will speed continued improvement of cotton production and help sustain one of the world's largest industries," said Professor Paterson.

The cotton sequence is among the highest-quality flowering plant sequences yet produced. A novel strategy integrating "next-generation" and conventional sequencing methods was used. Critical to the effort was information about the cotton hereditary blueprint, which had been accumulated over more than 20 years of research funded by the U.S. National Science Foundation, the U.S. Department of Agriculture, Cotton Incorporated, and other public and private agencies.

Capturing Light to Fuel Our Future

## Announcements

- Jan 16, 2012

Phytozome v8.0 has been released!

- Oct 07, 2011

Release of *Thellungiella halophila* genome and Biomart sequence issue fixed.

## Releases

- December 22, 2011

*Asterochloris* sp. Cgr/DA1pho v1.0

- August 22, 2011

*Micromonas pusilla* CCMP1545 v3.0

- January 8, 2010

*Cucumis sativus* v1.0

- January 8, 2010

*Mimulus guttatus* v1.0

- December 18, 2009

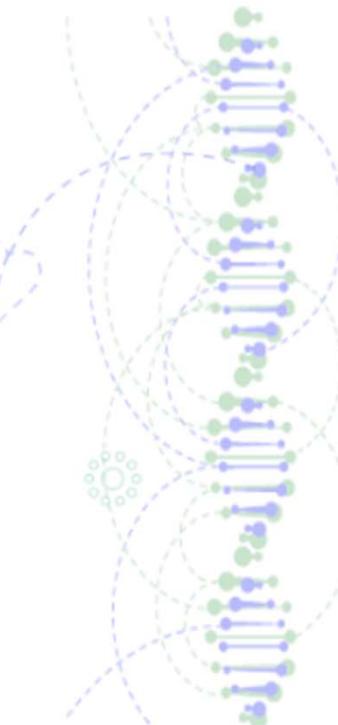

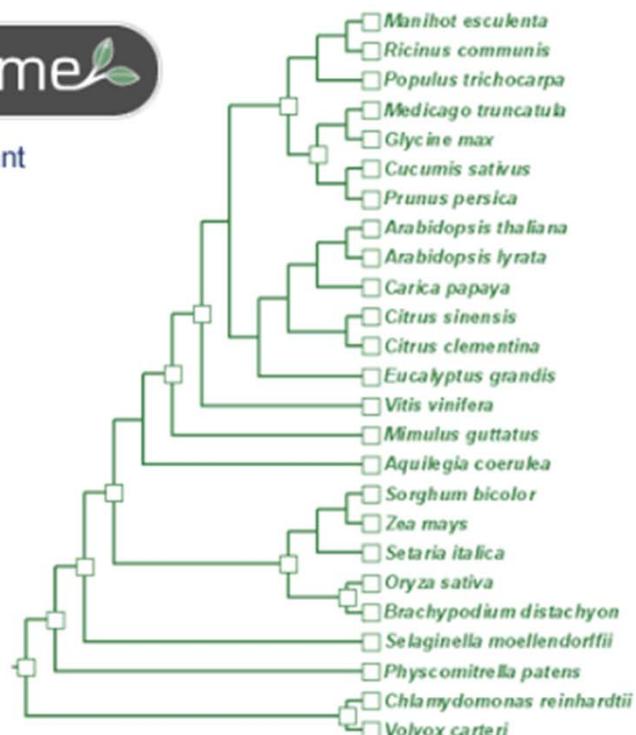

*Coccomyxa* sp. C-169 v2.0

### Welcome to Phytozome!

Phytozome is a joint project of the Department of Energy's Joint Genome Institute and the Center for Integrative Genomics to facilitate comparative genomic studies amongst green plants. Families of orthologous and paralogous genes that represent the modern descendants of ancestral gene sets are constructed at key phylogenetic nodes. These families allow easy access to clade specific orthology/paralogy relationships as well as clade specific genes and gene expansions. As of release v8.0, Phytozome provides access to thirty-one sequenced and annotated green plant genomes which have been clustered into gene families at eleven evolutionarily significant nodes. Where possible, each gene has been annotated with PFAM, KOG, KEGG, and PANTHER assignments, and publicly available annotations from RefSeq, UniProt, TAIR, JGI are hyper-linked and searchable.

### Announcements

[14 Feb 2012] A service outage for filesystem maintenance is currently scheduled for Wednesday, February 15th, 2012 from approximately 7 AM to 2 PM Pacific Standard Time.

[16 Jan 2012] Phytozome v8.0 has been released!

[12 Dec 2011] A service outage for filesystem maintenance is currently scheduled for Tuesday, December 13th, 2011 from approximately 12 AM to 3 PM Pacific Standard Time.

### News

[16 Jan 2012] **Phytozome v8.0 has been released!**

The lastest version of Phytozome has been released. Version 8 includes 21 genomes assembled and/or annotated at the JGI, and 9

[12 Dec 2011] **Service Outage Tuesday, December 13th, 2011**

A service outage for filesystem maintenance is currently scheduled for Tuesday, December 13th, 2011 from approximately 12 AM to 3 PM

[07 Oct 2011] **Release of Thellungiella halophila genome and Biomart sequence issue fixed.**

The version 1.0 genome annotation and assembly of Thellungiella

[05 Aug 2011] **Service Outage Tuesday, August 9th, 2011**

A service outage for filesystem maintenance is currently scheduled for Tuesday, August 9th, 2011 from approximately 7 AM to 5 PM Pacific
