The EFS® cotton management system is a group of related software programs designed to work independently and cooperatively to manage cotton as a raw material and asset. By providing tools to manage most aspects of cotton's lifecycle, the cotton management system seeks to improve the efficiency of cotton flow, augment the efficiency and utility of cotton, increase cotton's profitability, and enhance the demand for cotton.

**MILL™ Software**

MILL™ software manages a mill's acquisition and use of USDA MFP cotton. The groups and categories system can aid mills in creating uniform mixes but is best suited for a specified end product.

**EFS®USCROP™ Software**

EFS®USCROP™ software enables a user to review and analyze crop data using USDA FVP grading information. Complicated sets of cotton classing data can be simplified and enhanced with a variety of reports and graphs.
